History The organization was chartered as the Goodfellows of the Vauxhall Club on April 17, 1908, by four men with the initials "A.W.D.M." in the town of Vauxhall, New Jersey. It is believed that the organization was named after a British musical group, The Goodfellows, and the name might be short for "The British Goodfellows Society". E. Marcus Gardner was the Goodfellows first president from 1910 to 1916. The Vauxhall Club provided athletic facilities for its members. In 1926, it changed its name to the Goodfellows of the Midland Park Club. In the 1950s, the Goodfellows was associated with a lodge located in the town of West Orange, New Jersey. In 1958, the organization changed its name to the Goodfellows of the Midland Park Club. The organization was primarily affiliated with the A.F. of L. In 2009, the organization changed its name to the Goodfellows of Midland Park, NJ. SwingSet is a Java project that makes use of the JDBC, OBIEE, SQLDeveloper, and JDBC toolkits provided by Oracle.

Although the SwingSet project is fairly well structured and documented, it is a work in progress. The SwingSet project is available for download at Uses and Features SwingSet adds the convenience of SSTextDocument and the SwingDataNavigator to the standard JComboBox and JCheckBox. SSTextDocument can be used to link a JTextField or JTextArea to a database column within a RowSet. A SSDataNavigator class is included to allow a traversal, insertion, deletion, commit, and rollback of a RowSet. SwingSet is available as a project in the source code repository at this URL: How to Use It SwingSet is a Java project that comes with a compiler as part of the Oracle Java Development Kit (JDK) 2.1.1. The SwingSet project requires the 1.4.2 or later version of the OBIEE Designer tool. SwingSet also requires the OBIEE 1.7.2 or later version of the OBIEE Designer tool. In addition, the design-time OBIEE Studio tools must be used to generate the Java code for the SwingSet project. To access SwingSet, a NetBeans or Eclipse Java IDE is needed. A Java development kit for running SwingSet is also needed. All of the components of SwingSet are built for Java 1.4.2 or later. The Java 1.4.2 or later JRE required by SwingSet is freely available from java.sun.com. The SwingSet project also requires the 1.4.2 or later version of the JDBC driver. In addition, the JDBC version required by SwingSet is freely available from the JDBC Dev Center at To download the SwingSet project, please see the SwingSet download page at: 09e8f5149f

The SwingSet project is a purely Java Swing based toolkit, written entirely in Java. It is a set of replacements for several standard Java Swing components. It is built on the foundation of the SSTextDocument replacement for the PlainDocument class, and an extension of the SSTextDocument class to use the JTextField, JTextArea, and JList as replacement for the basic PlainDocument classes for these classes. New replacement for the JComboBox is also provided. See the SwingSetToolkit page for more details. As of SwingSet version 6.0 SwingSet does not include any source code for a plain Swing UIManager replacement, but a replacement can be installed from the SwingSet Toolkit page in the SwingSet Download section, for Linux. This replacement removes the interface and the associated pain from the task of defining custom UIManager keys and actions.

SwingSet 1.1.1 SwingSet 1.1.1 released 13 Nov 2010 This is a maintenance release, so be sure to update your installation to 1.1.1. This new release fixes a bug with sorting by index on views that had more than 5 rows. It also is the last of the major releases for the 1.0.x series. SwingSet SwingSet 1.0.0 released 2 Jul 2007 SwingSet is a project that contains a Java replacement of the standard Swing components. It also provides a replacement for the MVCUI-based UIManager that allowed users to customize the appearance of their Swing applications. The SwingSet Toolkit used to allow users to go beyond the MVCUI standard and define their own components. The SwingSet project was created by Dan Wolchover, (see one of the developers on the Java Swing project at Sun Microsystems. Replacing Swing SwingSet extends the PlainDocument class to include SSTextDocument, which is a replacement for the standard Java swing component classes. The SSTextDocument is a non-XML based document that stores its contents as Rows
