* **Preset**. The Preset feature provides the capability to save your image settings so that you can use the same settings for multiple images. In this way, the same image is processed with identical settings each time, whether you're designing a print on a 10 x 13-inch printer or creating a photo book for a 64-inch mural. * **Perspective warp**. The Perspective warp filter allows you to make objects in the background appear to be in the foreground, changing the perspective of the image. The Blur filter is useful for creating a soft focus on an image or for adding a soft touch to a hard surface. * **Burn, dodge, and brighten**. These filters allow you to introduce texture to an image, make an area of the image brighter or darker, or increase contrast. * **Levels, Curves, and other adjustments**. The Levels feature allows you to bring out or darken one area of an image and shadows in another area. You can also use the Curves feature to straighten or soften the edges of an image. The Exposure slider controls how light or dark a specific area is.
