Power Link VR is a port of Robotry! for the HTC Vive. The original game was developed and is 100% complete, but it required a Unity SDK which wasn't available for the Vive at the time. The Power Link is a simple adapter that allows the Vive to do all the things Steam Controller does, as well as a lot more. It's the cheapest, most accessible way to get into Robotry! VR. For more information, visit: Credits : Robotry! is developed by ReFlect Studios, aka Funmagnet. The HUB in the single player mode and multiplayer games is designed by J.Ken Smith. Gameplay and Coding is 100% complete but is only accessible in VR. Made with Unity, processed with Daydream Emulator. Without Steve, we couldn't do this! Come say hi! Facebook : Twitter : Instagram : The majority of this game is developed in-house by Robotry. Check out their YouTube channel here: Robotry is a full-body physics game where you must gather items and overcome obstacles while building your own robot as you navigate different worlds. Have a look at our website to learn more about the robot and how it works: Play the game and learn more about robotics in roboticsweek.org Want to be notified of all the latest robot news?
