EARTH, FINDED BY UNAWARE OTHERS ELDEN and its cast of fantasy characters live in a world populated by the mythical race. As an outsider, they encounter a great variety of creatures and people who are different from themselves. •An Epic Drama Born from a Myth An epic drama that unfolds through the journey of the characters, in which your own thoughts will play a crucial role in determining the outcomes of the story. •A Fantasy Drama True to Its Genre A fantasy drama in which your actions will determine the fate of the world and every character who belongs to it. THE COMPANY Chrono Shocks is a subsidiary of Sekai Project Inc. (Tokyo), an experienced and reputable company in the gaming industry. We are delighted to have the opportunity to create a game within the fantasy genre that we deeply love. DETAILED INFORMATION Development Period Within the game are "narrative exploration", "phenomenal design", "complex web of interaction", and "high-definition imagery." To create all these in an exciting world, we are planning to complete the game with a different theme for each of the 2 content updates, as our major focus will be to provide a smooth transition for the users from one release to the next with a lack of new content. We also believe it is more important to incorporate the theme of "growing" in our development rather than only the theme of "exploration" and "matching" that we initially thought. We will aim for new elements to be added in other areas such as tools for builders, weapons, and armor. As you progress in the game, you will be able to collect and take back parts of your own original creations and spread them across the world. We are planning to release additional new content periodically, adding additional story elements and different ways for you to customize your character, while keeping the game high quality. Character Model and Art Work The characters are 3D rendered in 3DCG using the built-in graphics engine. Although most of the visuals are created by hand, the character creation system is fully integrated with the 3DCG engine to produce clean and realistic result. The different models of the characters in the game are composited by importing each required geometry and texture. The process of fabricating the models requires a lot of experience and adjustment, and we have been creating them manually to avoid any mistakes during the production process.
