Linux and other platforms Because many other companies also make versions of Photoshop, you may find that you can use a program other than Photoshop on Linux or another OS. For example, GIMP is an open-source version of Photoshop that you can run on Linux. The version currently available for Linux is GIMP 2.9.11. For other platforms, such as the iPad, you can use a graphics tablet and a high-end stylus to paint on your screen. Some tablets also let you draw freehand. And then there are tablet apps that offer a variety of photo tools to use on the iPad. I personally like the Nexus tablet because it works well with the creative tools built into Android.

Narrowing Down a Photo or Video's Media Type

A media type is the kind of file type that you see on the file name lines of your computer's folders. For example, if your photos are stored in a folder, the folder name may include the type of file used. Figure 2-8 shows the file name of a photo stored in a folder. The information in the file name is read by the program you use to view images, such as the picture shown. FIGURE 2-8: A file's media type is in the file name. I've been browsing on Webstorm for a while now and I'm loving it! But, most of the tutorial tutorials only focus on the Groovy or Ruby skills. What's New In?

Fatal chronic obstructive lung disease in Western Australia: comparison of medical and underlying pathology records. To compare the rates of recognized and suspected chronic obstructive lung disease (COLD) in death certificates with rates of possible COLD by a standardized record review of the underlying pathological findings. A standardized record review of the pathology reports for all cases of COLD in deaths occurring in Western Australia in 1989, supplemented by additional cases, and known cases of COLD, was undertaken. A total of 514 COLD deaths were identified in Western Australia between 1981 and 1989. The death certificate diagnoses were in most cases based on suspected COLD rather than recognized COLD as defined by the International Classification of Diseases. COLD was found to be the underlying cause of death in 67% of deaths due to emphysema, 34% of deaths due to chronic bronchitis, and 50% of deaths due to COPD. Recorded rates of recognized COLD in Western Australia in 1989 were no higher than in 1977, and the recorded rates of suspected COLD as the underlying cause of death in 1989 were not appreciably lower than in 1977. The rates of diagnosed COLD in this study were lower than those in two other Western Australian studies, possibly as a result of the proportionate underascertainment of recognized COLD from 1979 to 1985. The relatively low rates of diagnoses of COLD as the underlying cause of death in some Western Australian deaths may be related to the use of surrogate diagnoses rather than to a true lack of disease in this population.
