A: Go to this link: In this link there is for HP Endeavor Enterprise, but change "HP Endeavor Enterprise" to "HP Endeavor". There is NO reason to install driver 5. "%USERPROFILE%\Desktop\HP Endeavor 4.0.0.4406" Q: How to tag questions that are specific to a certain language? Some languages have a lot of prefixes on variable names, like \$_ for PHP and \$ for JavaScript. Is it better to have a tag specific to such languages, like [php-prefix] or should we just ignore the prefixes and let it be up to the language-specific sites? A: Usually, the tag should be specific to the language, since it is the first thing that would come to mind if someone wants to look for, for example, a PHP page. To give an example, here is a question on Code Review about Java, which I think could use a [java] tag: You should have a custom page that explains the meaning of the different language-prefixes, e79caf774b
