for Autodesk. Autodesk user guides and manuals, tutorials,. How to geostudio. Super crack. the definitive. 2010-07-08 01. 2011-01-10 01.Q: How

to run action on 2 controls with differrent results at the same time I want to run action on 2 controls at the same time. One of them is a menu that shows currently active

layer and which shows on the click of a button. The second one is related to the same object and computes the mean of all pixels in this layer. All these information

is given in the form of labels so its easier for user to interact with. Problem: I want that the click on the menu runs the computation on the current layer and the computation

itself runs when user clicks on a button. A: You can use a single ActionEvent handler as the action for both menu item and button and preventDefault that event and to that

event run different code. boolean running = true; JButton b1 = new JButton("Click"); b1.addActionListener(new ActionListener(){ @Override public void actionPerformed(Actio

nEvent e) { if(running) { // run computation running = false; } } }); JMenu menu = new JMenu("Menu"); menu. c6a93da74d
